

Agenda

1. Best Practices for using vibe-coding tools.
2. Tokenization - Byte Pair Encoding
3. Ai Agents and Agentic AI

The Spectrum of delegation

1. Inline completion (tab to complete the sentence).
2. Chat Explanation (Here we still have control, because we monitor and review the code we're copy-pasting).
3. Agent ("Implement OAuth, run test, fix failures, mail my boss, say good night to him").
4. Asynchronous Agents ("here's a PR ticket, and fix it")

How to create good quality harness:

1. Specify exactly the feature/product you want to implement -> ask for a given create a very very detailed prd.md
2. Point/Reference to any code-base you currently have -> Reference your code.
3. Design/Ask for tests, for every phase of your project. -> Verification Loop.
4. Ask the Agent to keep you involved in the project -> any key design decisions.
5. Don't let them touch any production secrets.

For given bug, reflect and come up with about 8-10 different reasons why the bug may have happened, then distill it down to 2-3 most likely scenarios and then discuss with me.

task1: latency has increased by about 10ms.

Question: How does authentication work for an end-user.
